

Ideation Phase – Incident Lifecycle Automation in ServiceNow

Project Ideation Document

1. Problem Identification

Organizations receive a large number of IT incidents every day. Manually creating, assigning, tracking, escalating, and closing incidents can cause delays, missed SLAs, and poor communication.

2. Proposed Idea

The proposed solution is to develop an Incident Lifecycle Automation system in ServiceNow that automates the complete incident process from incident creation to closure.

3. Main Objective

The main objective is to:

- Automatically create and categorize incidents.
- Assign incidents to the appropriate support group.
- Set priority based on Impact and Urgency.
- Track incident progress automatically.
- Monitor and enforce SLA deadlines.
- Escalate overdue incidents.
- Notify users and support teams about important updates.
- Maintain complete incident history.

4. Key Automation Ideas

Area	Automation
Incident Creation	Create incidents through user/service requests
Categorization	Automatically determine category/subcategory
Priority	Calculate priority using Impact + Urgency
Assignment	Automatically assign the correct Assignment Group
SLA	Start and monitor SLA automatically
Notifications	Send notifications for creation, assignment, updates and closure
Escalation	Escalate incidents when SLA is approaching/breached

Area	Automation
Resolution	Capture resolution details before closure
Closure	Automatically close incidents after required conditions are satisfied
Reporting	Generate dashboards and incident performance reports

5. ServiceNow Features Considered

The project can make use of:

- Incident Management
- Business Rules
- Client Scripts
- UI Policies
- Flow Designer
- Notifications
- SLA Definitions
- Assignment Rules
- Reports and Dashboards

6. Expected Outcome

The system should reduce manual effort, improve incident response time, prevent SLA breaches, provide better visibility into incident status, and ensure that incidents follow a standardized lifecycle.

7. Incident Lifecycle

New → Assigned → In Progress → On Hold → Resolved → Closed
