

Project Planning Phase – Incident Lifecycle Automation in ServiceNow

Project Planning Document

1. Project Objectives

The project will focus on automating the complete incident lifecycle in ServiceNow to reduce manual effort and improve incident resolution time.

2. Project Scope

The project includes:

- Incident creation and tracking
- Automatic categorization and prioritization
- Automatic assignment to support groups
- SLA monitoring
- Automated notifications
- SLA-based escalation
- Incident resolution and closure
- Reports and dashboards

3. Technology and Tools

Component	Technology
Platform	ServiceNow
Automation	Flow Designer
Server-side Logic	Business Rules
Client-side Logic	Client Scripts
Form Control	UI Policies
SLA Management	ServiceNow SLA
Notifications	ServiceNow Notifications
Reporting	Reports & Dashboards

4. Project Activities

- 1. Requirement Analysis** – Identify business and system requirements.
- 2. System Design** – Design the incident lifecycle and automation flow.
- 3. ServiceNow Configuration** – Configure tables, fields, forms, and roles.
- 4. Automation Development** – Create Business Rules, Client Scripts, UI Policies, and Flow Designer flows.
- 5. SLA & Notification Setup** – Configure SLA rules, alerts, and escalation notifications.
- 6. Testing** – Test incident creation, assignment, escalation, resolution, and closure.
- 7. Deployment** – Deploy the completed solution.
- 8. Documentation** – Prepare technical and user documentation.

5. Team Responsibilities

Role	Responsibility
Project Manager	Planning, coordination, and progress tracking
ServiceNow Developer	Scripts, Business Rules, and automation
ServiceNow Administrator	Configuration, roles, SLA, and notifications
Tester	Test cases and defect identification
Documentation Team	Project and technical documentation

6. Project Timeline

Planning → Requirements → Design → Development → Testing → Deployment → Documentation

7. Expected Deliverable

A functional ServiceNow Incident Lifecycle Automation system that automatically manages incidents from creation through assignment, SLA monitoring, escalation, resolution, and closure, with appropriate notifications and reporting.
